

**fischer** 

**FAZ II Plus.**  
The power  
anchor for highest  
demands.

# FAZ II Plus.

## Powerful & flexible.

The distinctive edge holds the expansion clip in position even with reinforcement hits, thus ensuring **safe installation**.

Quick and easier assembly **without the need for drill hole cleaning (M8-M24)**.

With a choice of pre-assembled **normal washer or large washer GS** and with washer **HBS** in compliance with wood construction standard **DIN 1052** (not pre-assembled).

With the new assessment (ETA), the tensile strengths increase decisively. As a result, **fewer fixing points and anchors are required**.

The interaction of cone and expansion clip significantly increases load-bearing capacity and makes **minimum edge distance and axial spacing possible**.

Numerous approval certificates for different substrate materials (concrete C12/15-C80/90, steel fiber concrete, solid sand-lime brick) **increase the number of applications and fields of use**.

The sizes of the special cap nut version (M10 and M12) can be used for the **application on sophisticated design**. They are also implemented in the ETA assessment.

### Building materials

Suitable for building materials, such as

Cracked concrete

Uncracked concrete

Steel fiber concrete

Solid sand-lime brick

### Approvals

ETA-19/0520  
for cracked concrete

R120

# FAZ II Plus.

## The power anchor for dynamic applications.

Quick and easy installation for higher efficiency as a perfect alternative to injection systems for dynamic stress.

The new ETA confirms the use of the FAZ II Plus for dynamic loads for diameters M16-M24.

Dynamic Set for safe installation.

### Your advantages at a glance

- The new ETA confirms the use of the FAZ II Plus for dynamic loads for diameters M16-M24 (galvanised steel or stainless steel).
- The fast installation process of the FAZ II Plus provides an efficient fixing solution for dynamic applications with low load cycles with an immediately loadable fixing point.
- Easy and safe installation with Dynamic Set.

### Functioning

- The FAZ II is suitable for pre-positioned and push-through installation.
- For dynamic loads, an additional „dynamic set“ is used, which is filled with injection mortar (compressive strength  $\geq 50\text{N/mm}^2$  e.g.: FIS V, FIS EM Plus, FIS HB or FIS SB) after installation.

### Approvals

ETA-20/0897  
for dynamic load in  
cracked concrete

# Performance features at a glance

## Service life 120 years

### Lasts for eternity:

An external independent assessment confirms the service life of anchorages up to 120 years. Thus, the FAZ II Plus outlasts a whole century and is perfectly suited for large, long-lasting construction projects (M10-M16).

## Seismic applications in earthquake zones

### Always on the safe side with FAZ II Plus:

The FAZ II Plus allows the absorption of high seismic loads of performance category C1 and C2 for diameters M10-M24 with and without the use of the filling disc FFD at installation.

## Dynamic

### Perfect alternative to injection systems for dynamic stress:

The fast installation process of the FAZ II Plus provides an efficient fixing solution for dynamic applications with low load cycles with an immediately loadable fixing point.

## Installation without drill hole cleaning

### The partner for fast installations:

The ETA covers the use of hollow drills and diamond core bits. An expert opinion regulates the assembly without drill hole cleaning (M8-M24). This simplifies installation and speeds up the process for efficiency on the construction site.

## Variable embedment depths

Enables most accurate adaption on the loads (M6 - M20).

### 1. Maximum load with 60 mm embedment depth FAZ II Plus 10 R

- Maximum permissible tension load of 6,2 kN and shear load of 15,1 kN.

### 2. Fast installation thanks to minimum embedment depth FAZ II Plus 10 R

- 40 mm embedment depth = permissible tension load of 4,1 kN and shear load of 10,8 kN.

**FiXperience**

# FiXperience. Safe and reliable.

The fischer design Software FiXperience gives you safe and reliable support in dimensioning your projects whether you are a planner, structural engineer or craftsman. FiXperience is set up modularly

and useable for a variety of applications. The program includes an engineering software with special application modules:

C-FIX

#### C-FIX

The anchor design program for steel and bonded anchor in concrete, as well as injection systems for masonry. Now with the new FEM design tool for the realistic design of anchorages.

MORTAR-FIX

#### MORTAR-FIX

To determine the injection resin volume for bonded anchors in concrete and masonry.

WOOD-FIX

#### WOOD-FIX

For the calculation of on-rafter insulation systems and joints in structural timber engineering.

RAIL-FIX

#### RAIL-FIX

For the design of fixings for railings on reinforced concrete slabs and staircases.

INSTALL-FIX

#### INSTALL-FIX

For the design and dimensioning of MEP installation systems.

FACADE-FIX

#### FACADE-FIX

For the design of façade fixings with timber sub-structure.

REBAR-FIX

#### REBAR-FIX

For the design of post-installed rebars in reinforced concrete.

CHANNEL-FIX

#### CHANNEL-FIX

For the design of cast-in channels and inserts.

PLANNER

#### Electronic planner folder

All important documents and records from fischer in one program.

Register on the [myfischer portal](#) to use FiXperience online or download FiXperience for free.

# Installation

## Mounting FAZ II Plus in concrete

## Push trough installation of the cup nut version with setting gauge

## Mounting without drill hole cleaning

## Mounting with Dynamic Set

# Applications

## Design examples

### Processing of thin or slim components, balcony railings under thin concrete plate

#### Basic conditions

- Fixing to the underside of the balcony
- Rail load 0.5 kN/m
- Length of balcony 2.500 mm
- Rail height 1.000 mm
- Post distance 1.000 mm
- Each anchor plate 4 pieces FAZ II Plus 10/10 K R

### Installation of cable trays with suspended supports

#### Basic conditions

- Cable trays 120 mm
- Distance between anchors 2500 mm
- Distance between the suspended supports 60 x 150 mm
- Anchor plate 100 mm
- Thickness of concrete ceiling 2 pieces FAZ II Plus 10/10 K

# Applications

FAZ II Plus with dynamic loads (M16-M24).

## Dynamic applications

Elevator

Lifting platform

Conveyor belt

FAZ II Plus standard version with nut and washer made of galvanised steel for indoor use.

## Pipeline installation

Pipe suspensions

Cable trays

FAZ II Plus made of stainless steel R for outdoor use with or without cap nut.

Cap nut version in stainless steel for outdoor use.

## Railing fixings

Railing anchorages

FAZ II Plus GS version with large stainless steel washer for substructures with slotted holes outdoors.

**Facade construction**

Facade substructures

Rainscreen facades

FAZ II Plus HBS Version gvz. with large washer according to timber construction standard DIN 1052.

**Wood construction**

Sleeper anchorages

Canopy on wall

**Dynamic  
fixing solutions.**

The appropriate system for every application.

fischer filling disc FFD

Optional e.g. for use under seismic loads C2 or to minimise the hole clearance:

The annular gap between bolt and attachment may be filled with mortar compressive strength  $\geq 50 \text{ N/mm}^2$  e.g. FIS V Plus, FIS EM Plus, FIS HB and FIS SB. The backfilling disc would be used in addition to the standard washer to be used. The thickness of the backfill disc must be taken into account for  $t_{fix}$ . The counterbore in the filling disk must point in the direction of the attachment part.

<sup>1)</sup> Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of  $\gamma_L = 1.4$  are considered. As a single anchor counts e.g. an anchor with a spacing  $s \geq 3 \times h_{ef}$  and an edge distance  $c \geq 1.5 \times h_{ef}$ . Accurate data see ETA.

<sup>2)</sup> Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

<sup>3)</sup> In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

**Bolt anchor FAZ II Plus dynamic**

Design values for cyclic fatigue loading<sup>1)</sup> of a single anchor in cracked or non-cracked normal concrete of strength class C20/25<sup>2)</sup>.  
For the design the complete current assessment ETA-20/0897 of 20.12.2022 has to be considered.

Type	Material/ surface	Effective ancho- rage depth  $h_{ef}$ [mm]	Mini- mum member thick- ness  $h_{min}$ [mm]	Instal- lation torque  $T_{inst}$ [Nm]	Cracked concrete				Non-cracked concrete			
					Design values of tension ( $\Delta N_{Ed,max}$ ) and shear loads ( $\Delta V_{Ed,max}$ ); minimum spacing ( $s_{min}$ ) and edge distances ( $c_{min}$ ) with reduced loads				Design values of tension ( $\Delta N_{Ed,max}$ ) and shear loads ( $\Delta V_{Ed,max}$ ); minimum spacing ( $s_{min}$ ) and edge distances ( $c_{min}$ ) with reduced loads

<sup>1)</sup> The design values of the cyclic fatigue loading apply for load cycles  $> 10^6$  in accordance with design method I acc. to TR061 – for unknown static lower load. If the static lower load is known and / or for lower number of load cycles higher load values are possible. The partial safety factors as regulated in the design standard are considered. As a single anchor counts e.g. an anchor with a spacing  $s \geq 3 \times h_{ef}$ . Drill hole cleaning acc. to assessment.

<sup>2)</sup> For higher concrete strength classes up to C50/60 higher permissible loads may be possible. - see assessment. The concrete is assumed to be standard-reinforced.

<sup>3)</sup> In the case of combinations of tensile loads and shear loads, with reduced or minimum spacing and edge distances (anchor groups) the design must be carried out in accordance with the provisions of the complete assessment.

**fischer hollow drill bit.  
For drilling with low dust  
as well as for efficient and  
approved anchoring.**

# fischer Service.

## Our 360° service to you.

From software solutions, to training, to personal consulting. As a reliable partner, we are always happy to assist you with words and deeds.

## Design Software fIXperience Suite.

The fischer design Software fIXperience gives you safe and reliable support in measuring your projects whether you are a planner, structural engineer or craftsman. Measuring has never been so simple!

Test it now and download it for free:  
[www.fischer-international.com/fixperience](http://www.fischer-international.com/fixperience)

## fischer PRO. The Mobile Guide to Fixing Solutions for Professionals.

The fischer PRO App is a mobile guide to fixing solutions offering professionals the opportunity to quickly and easily find out about products, identify the right fixing solution through the digital guide and/or find a local dealer. Download now from Apple App Store or Google Play Store.
